Oslo University Hospital, Sunnaas Rehabilitation Hospital and the University of Oslo

Oslo University Hospital (OUH) is Norway’s largest hospital with over 24 000 employees and a budget of 23 billion NOK. The Hospital has a local function for parts of Oslo’s population. It has a regional function for the inhabitants in the South-Eastern Norway Regional Health Authority, as well as a large number of national functions. The Hospital is responsible for a large part of the medical research and education of health personnel in Norway.

Sunnaas Rehabilitation Hospital offers multidisciplinary rehabilitation to patients with complex functional impairment following illness or injury. The Hospital also holds national responsibilities for rare congenital disorders and locked-in syndrome.

The University of Oslo (UiO) is Norway’s largest research and educational institution with 28 000 students and 7 000 employees. Professional breadth and internationally recognized research environments make UiO an important contributor to society. The Faculty of Medicine was established in 1814 and works for progressive education, research and dissemination for the patients’ and society’s best interests.

Division of Clinical Neuroscience

The Division of Clinical Neuroscience encompasses the disciplines of neurology, neurosurgery, physical medicine and rehabilitation, neuro habilitation and complex epilepsy. The proximity to patients and their medical issues are the cornerstones for the research conducted at our hospitals, and the research aims at improving patient care. High ethical standards ensure the confidentiality and our goal is to continuously improve diagnostics, treatment and management for all our patients.

Research activity

The Division’s research activity is organized into 16 different research groups covering a broad range of basic, clinical and epidemiological research, with an overall aim to improve patient care with emphasis on diagnostic, therapeutic and preventive measures. Most group leaders have a combined position at the hospital and the University of Oslo. In total, the Division has 17 Professors, 2 Associate Professor, several postdoctoral fellowships and PhD students, administrative staff and technical staff.

The Division has an advisory research board which in 2021 consisted of: Professor and Head of Research John-Anker Zwart, Division Director Eva Bjørstad, Professors and Senior Consultants Morten Lossius, Eirik Helseth, Mona Skjelland, Nada Andelic, Bjørnar Hassel and Administrative Manager Agnete Hager.

In 2021 there were in total 250 registered peer reviewed publications and 11 PhD dissertations, while Sunnaas Rehabilitation Hospital published 86 registered peer reviewed articles and had 2 PhD dissertation.

- Lars-Johan Viddal-Valaas, PhD fellow, UiO
- John Bjørneboe, PhD, Researcher, OUH

Research profile and aims
The research group generates knowledge about the mechanisms and consequences of trauma, patient care, trends and challenges in treatment and rehabilitation including the patients’ healthcare needs. The main research focus is traumatic injuries including traumatic brain injury (TBIs), multiple trauma and aneurysmal subarachnoid hemorrhage (aSAH). The research conducted by this group is multidisciplinary, where collaboration between genetics, intensive care medicine, neurosurgery, neuroradiology, neuropsychology and rehabilitation has been established over the last 17 years.
By combining the perspectives and methods of basal, clinical and health care service research, we may provide unique knowledge on the consequences of injuries, how to organize effective patient care and improve the functional outcomes after injuries.

The main aims of the research group for 2020-2025 are:
- To better understand the mechanisms, course and consequences of TBI, multiple traumas and aSAH by using translational research strategy
• To develop (and implement) cost-effective rehabilitation interventions to target TBI-related challenges in the short- and long-term after injury
• To improve collaboration and knowledge transfer between primary and secondary health care services to ensure seamless rehabilitation for trauma patients
• To strengthen existing and initiate new national and international multicenter research collaborations

Main ongoing projects
• Traumatic brain injury; needs and treatment options in the chronic phase. A randomized controlled community-based intervention.
  Principal investigator: Cecilie Røe, PhD fellow Ida M. Borgen Henriksen, postdocs: Marit V. Forslund, Solveig L. Hauger, Ingerid Kleffelgård
• OSU6162 in the treatment of fatigue and other neuropsychological sequelae after aneurysmal subarachnoidal hemorrhage - a double-blind, randomised, placebo-controlled study.
  Principal investigators Angelika Sorteberg and Tonje Haug Nordenmark. PhD fellow Elin Western
• Rehabilitation needs after trauma. In collaboration with the National Trauma Register, University Hospital of North Norway, and CHARM.
  Principal investigator Nada Andelic, PhD fellows Håkon Moksnes and Christoph Schäfer, Postdoc Mari S. Rasmussen
• Sub-threshold training in patients with persistent post-concussion symptoms after mild TBI – a randomized controlled study.
  Principal investigator: Ingerid Kleffelgård, PhD fellow Lars-Johan Viddal Valaas
• Changes in physical, cognitive and emotional functions 5 and 10 years after aneurysmal subarachnoid hemorrhage.
  Principal investigators: Tonje Haug Nordenmark and Tanja Karic
• The effect evaluation of combined cognitive and vocational interventions after mild-to-moderate traumatic brain injury: a randomized controlled trial and qualitative process evaluation.
  Principal Investigator: Nada Andelic, PhD Emile I. Howe and PhD fellow Silje Fure
• The family as a resource for improved patient and family functioning after traumatic brain injury. A randomized controlled trial of a family centered intervention.
  Principal investigator Helene L. Søberg, PhD Mari S. Rasmussen

Other projects
• Center-TBI (Collaborative European NeuroTrauma Effectiveness Research in TBI).
  Principal investigator at the OUH site Nada Andelic
• Development of persistent fatigue after moderate-to-severe TBI. In collaboration with Sunnaas Rehabilitation Hospital.
  Principal investigator Marianne Løvstad, PhD fellow Daniel Løke
• Acute treatment of traumatic brain injury at Oslo University Hospital. Profile of patient population, hospital resource use and hospital discharge. In collaboration with Dept. of Neurosurgery.
  Principal investigators Mads Århus and Eirik Helseth, PhD fellow Cathrine Buaas Tverdal
• Pediatric traumatic brain injury: A prospective study investigating incidence, outcomes and unmet treatments needs 2 years post-injury. In collaboration with Children Dept.
  Principal investigators Trond Diseth and Mia Myhre, PhD fellow Hilde M. Dahl

Research profile and aims
The research unit generates knowledge regarding diagnostics, treatment and rehabilitation of painful musculoskeletal conditions. The main focus is on neck, back and shoulder conditions. The research is multidisciplinary, and collaboration with basal, clinical and health care service milieus established. Based on the framework of the International Classification of Functioning, Disability and Health (ICF) and the biospsychosocial model, interaction between the genetic and other basal disease mechanisms with psychosocial, personal and environmental factors are studied regarding the course of pain, functioning and participation. Furthermore, developing and evaluating treatment models in prospective and randomized studies, aiming to improve functioning and return to work are focus areas.

The main aims are:
- To understand the mechanisms, course and consequences of painful musculoskeletal conditions.
- To develop and evaluate treatment models for painful musculoskeletal conditions.
Ongoing projects

- A randomized controlled study of surgical versus non-surgical treatment for cervical radiculopathy. Principal investigator Jens Ivar Brox, PhD fellow Mirad Taso
- The effectiveness of radial extracorporeal shockwave therapy, standardized exercise program or usual care for patients with plantar fasciopathy. PhD fellows Marianne Mørk and Marte Heide
- Reliability of Modic changes. Principal investigator Elina Schistad
- Improving functioning and participation among persons with physical disabilities. Principal investigator Cecilie Røe. PhD fellow Line Preede
- Clinical course and prognostic factors for shoulder pain patients in primary and specialized care. Principal investigator Kaia Engebretsen
- Antibiotic treatment in patients with chronic low back pain and Modic Changes: randomized trial. Conducted by FORMI. Principal investigator in the research group Jens Ivar Brox and Elina Schistad
- Development of a minimum reporting set for rehabilitation services. Principal investigator Cecilie Røe
- The Norwegian Tennis Elbow (Note) study. Principal investigator Marianne Bakke Johnsen, PhD fellow Håkon Sveinall

- Marte Syvertsen, MD/PhD, Vestre Viken Hospital Trust and UiO
- Kaja Kristine Selmer, MD/PhD, OUH and UiO
- Ine Cockerell, MSc, OUH and UiO
Research profile and aims

Clinical research in patients with difficult-to-treat epilepsy, with particular focus on:

- Characterization of epilepsy syndromes (genotype/phenotype)
- Clinical pharmacology of antiseizure medications
- Diagnostic and treatment options; EEG, pharmacotherapy, surgery, VNS, ketogenic diets
- Psychosocial, psychiatric and neurocognitive aspects
- Psychogenic non-epileptic seizures

Dissertations 2021
None

Ongoing projects

PhD candidates in the UiO PhD program:

- **Torleiv Svendsen**: “Tolerability and efficacy of new antiepileptic drugs” Supervisor: Cecilie Johannessen Landmark. Co-supervisors: Ole Morten Rønning and Morten I. Lossius
- **Sigrid Pedersen**: “Epilepsy in Children: The Impact of the Gut Microbiota and Epigenetics in Successful Treatment of Epilepsy” Supervisor: Kaja K. Selmer. Co-supervisors: Knut Rudi, Per Ole Iversen and Benedicte Alexandra Lie
- **Merete Tschamper**: “Childhood epilepsy and parental health literacy” Supervisor: Marie Hamilton Larsen. Co-supervisors: Astrid K. Wahl and Rita Jakobsen
- **Konstantin H. Kostov**: “Clinical outcomes and determinants of effectiveness of vagus nerve stimulation in a large national refractory epilepsy population” Supervisor: Morten I. Lossius, Co-supervisor: Jukka Peltola
- **Gernot Hlauschek**: “Identifying novel imaging and clinical biomarkers of epileptogenesis poststroke” Supervisor: Morten I. Lossius, Co-supervisors: Patrick Kwan and Meng Law
- **Truls Vikin**: “Epilepsy in children-how are they doing?” Supervisor: Kari M. Aaberg, Co-supervisors: Pål Surén and Morten I. Lossius
Postdoc:

- **Silje Alvestad**: “Scandinavian multi-registry study of antiepileptic drug teratogenicity: The SCAN-A study”. Co-workers: Marte Bjørk, Torbjørn Tomsen, Jacob Christensen
- **Kristin Å. Alfstad**: “Risk factors for psychiatric symptoms and executive problems in youth with epilepsy” Co-workers: Morten I. Lossius, Betty van Roy, Berit Hjelde Hansen, Erik Hessen
- **Kari M. Aaberg**: «Development in childhood epilepsy». Co-workers: Pål Surén, Morten I. Lossius
- **Magnhild Kverneland**: “Who should be treated with ketogenic diet for epilepsy” Co-worker: Kaja K. Selmer
- **Erik Sætre**: “Mortality in Epilepsy” Co-worker: Michael Abdelnoor

PhD-candidates not yet in the UiO PhD program:

- **Fridny Heimisdottir**: “Genetic mosaicism in focal epilepsy. Creating a platform for precision medicine in mosaic disorders” Supervisor: Kaja K. Selmer Co-supervisors: Kristin Å. Alfstad, Inger-Lise Mero

PhD-candidates in the UiO PhD program, associated to the group:

- **Ine Cockerell**: “Treatment and follow-up in patients with tuberous sclerosis” Supervisor: Terje Nærland. Co-supervisors: Cecilie J. Landmark, Caroline Lund and Ketil Heimdal

National network

International networks

- **EpiCARE**: European Reference Network (ERN) on rare and complex epilepsies. Head of Scientific Advisory Board: Morten I. Lossius
- **NESREC Nordic Epilepsy Surgery Research Consortium**

International projects:

- “EURAP study”. *An International Antiepileptic Drugs and Pregnancy Registry* (International concerted Action on the Teratogenesis of Anti-epileptic Drugs) [EURAP - International Registry of Antiepileptic Drugs and Pregnancy](http://eurapregister.org), Silje Alvestad and Siri Myklebust, national coordinators
- “Computer based identification of morphometric abnormalities in MRI images in patients before and after operation in the temporal lobe” Kristin Å. Alfstad, Morten I. Lossius, Yugoslav Ivanovic, Pål Bache Martinsen, OUH and Lars Pinborg, Copenhagen University Hospital, Denmark
- “Detection and classification of seizures with wearable sensors - new technology in the diagnosis of epilepsy” Kristin Å. Alfstad, Antonia Villagran, Rune Markhus and Kristina Malmgren, University of Gothenburg and Sahlgrenska University Hospital, Sweden
“Ultra-long subcutaneous EEG monitoring: reliability, safety and impact on clinical management in uncontrolled epilepsies”Kristin Å. Alfstad, Oliver Henning, Margrete Halvorsen Bø, Arild Egge, OUH, Guido Rubboli, University of Copenhagen, Danish Epilepsy Centre, Dianalund, Denmark and Sándor Benizky, Aarhus University Hospital and Danish Epilepsy Centre, Dianalund, Denmark

“Nordic prospective observational study of outcomes after rare epilepsy surgery procedures” Fridny Heimisdottir, Kristin Å. Alfstad and Tove Hallbook, University of Gothenburg and Sahlgrenska Hospital, Sweden

“Children with refractory epilepsy and use of the newest antiepileptic drugs” Scandinavian project between the National Centre for Epilepsy in Norway and Danish Epilepsy Centre, Dianalund, Denmark; Margrete Larsen Burns, Marina Nikoronova, Danish Epilepsy Centre, Dianalund; responsible in Denmark, Cecilie Johannessen Landmark, project leader

“ERAS-Trial (Effect Related to Auto Stimulation): Does additional ECG-triggered stimulation increase the efficacy of Vagus Nerve Stimulation?” Oliver Henning, Hrisimir Kostov and Tatiana Evsikova, Eylert Brodtkorb, St.Olavs Hospital, NTNU, Lieven Lagae, UZ Leuven University Hospital, Belgium, Anne Sabers, University of Copenhagen, Denmark and Jukka Petola, Tampere University Hospital, Finland

“EEG in Nodding Syndrome (Onchocerca volvulus associated epilepsy)” Oliver Henning, Richard Idro, Makarere University, Kampala, Uganda

Group Members
• Aukrust, Camilla Grøver, PhD fellow UiO
• Dahlberg, Daniel, PhD, Oslo university hospital (OUH)
• Eide, Per Kristian, group leader
• Fric, Radek, PhD, OUH
• Lashkarivand, Aslan, PhD fellow, UiO
• Langvatn, Erlend, Consultant, OUH
• Quesada, Cesar Luis Vera, PhD fellow, UiO
• Slettebø, Haldor, Senior Consultant, OUH
• Sortberg, Angelika, professor, UiO / Consultant OUH
• Sorteberg, Wilhelm, dr.med., OUH
• Stanisic, Milo, dr.med., OUH
• Ringsby, Jon-Olav, Consultant, OUH
• Rønning, Pål Andre, PhD, consultant, OUH
• Valnes, Lars-Magnus, PhD, Postdoc, OUH
• Wiedmann, Markus, PhD, Consultant, OUH

Research profile and aims
The Neurovascular & Cerebrospinal Fluid Research Group (Division of Clinical Neuroscience, University of Oslo and Oslo University Hospital) teams up with a multidisciplinary group of neurosurgeons and neuroscientists, mathematicians, PhD candidates, Postdocs and students, to provide a broad collaboration with a common vision; to challenge, discover and improve our current understanding and treatment of complex neurovascular and cerebrospinal fluid (CSF) disorders. We address the close interaction between the cerebral vasculature and the CSF, which we consider to have major impact on cerebral metabolism and metabolic failure. The group has a translational perspective with a strong clinical basis.

From the clinical perspective, the following diseases and disease states are targeted:

• Intracranial aneurysms and subarachnoid hemorrhage, including neuro-intensive surveillance and outcome. Cerebral hemodynamics and cerebral revascularization. Pathophysiology and treatment of chronic subdural hematomas.
• Cerebrospinal fluid diseases and role of cerebrospinal fluid in metabolic function of central nervous system, particularly in neurodegeneration and dementia, CSF disturbances, vascular disease and cerebral bleeds, inflammatory disease and neuro-oncology.
• Neuro-inflammatory conditions, particularly related to neurosurgical diseases.
• Brain Monitoring. Neurosurgical pathophysiology, intracranial pressure and arterial blood pressure dynamics.
Ongoing projects

- **Cerebrospinal fluid**

- **Neurovascular**

- **Neuro-inflammation**
  Cerebral abscesses: Pathophysiology. Subdural hematoma: pathophysiology and role of neuroinflammation.

- **Brain monitoring**
  Invasive and non-invasive intracranial pressure (ICP).

**Research profile and aims**

Main focus on surgical complications and outcome after surgery for:

- Neurotrauma
- Traumatic brain injury
- Cervical spine injury
- Bicycle related injuries

**Ongoing projects 2021**

- Cervical trauma – Epidemiology and Surgical management
- Traumatic Brain Injury – Epidemiology and management
- CenterTBI – European study
- Transocular ultrasound for ICP measurement – with SINTEF/Nisonic
- GLOBAL NEUROTRAUMA OUTCOMES STUDY (GNOS)
PhD projects
- Odontoid fractures – Ali Rizvi
- Subaxial cervical fractures - Christina Teiner Høstmælingen
- Transocular ultrasound for ICP measurement - Dag Ferner Netteland
- Traumatic brain injury – Cathrine Buaas Tverdal
- Traumatic brain injury and ethics – Annette Robertsen
- Bicycle accidents – Pål Galteland
- Bicycle accidents – Ingar Næss
- Bicycle accidents – Mats Døving

“Forsterlingen” projects
- Bicycle accidents – Ingar Næss

Research profile and aims
After showing that the human brain contains stem cells which can differentiate into functional neurons, and that malignant brain tumors harbor cancer stem cells that are essential to tumor growth and progression, the Vilhelm Magnus Laboratory (VML) has focused purely on translational research, mainly on glioblastoma (GBM), the most frequent and deadly brain cancer (median survival in unselected series < 1 year).

This resulted in the first clinical protocol targeting stem cells in a solid tumor - an autologous vaccine against GBM stem cells, as well as an individualized systems medicine strategy, in which we test > 500 drugs against tumor stem cells from individual patients. The latter is also the first study of its kind in any type of solid tumor.

The Vilhelm Magnus Laboratory is a section within the Department of Neurosurgery.

Aims:
- To characterize cell types and cellular mechanisms in GBMs with special attention to GBM stem cells (GSCs)
- To develop therapeutic strategies against GBM targeting GCSs

Ongoing projects
Fifteen years ago we showed, for the first time, that stem cells from the adult human brain can differentiate into functional neurons, and that it is possible to generate a small nervous system with numerous neurons that fire action potentials and communicate via synapses, from a single stem cell, harvested from the adult human brain (Moe et al Brain, 2005;128:2189-99, Westerlund et al Exp Cell Res. 2003; 289:378-83, Moe at al Neurosurgery 2005;56:1182-8).
Simultaneously we started to grow cells from GBMs. A population of cells from these tumors turned out to have stem cell-like properties. Through extensive comparisons between GSCs and normal stem cells from the adult brain (Varghese et al Neurosurgery 2008;63:1022-33), we identified genes and pathways which are dysregulated in GSCs, and provided the first clinical dataset that support the cancer stem cell hypothesis in glioblastoma (Sandberg et al, Exp Cell Res, 2013).

VML members Elise Solli, Einar Vik-Mo, Cecilie J Sandberg, Marit Brynjufsen, Luna Djirackor, Iver Langmoen, Emily Palmero and Skarphedinn Haldorsson.

Development of a stem cell-based vaccine in patients with brain cancer:
We developed the first clinical protocol which targeted stem cells in a solid tumor by transducing dendritic cells from patients with mRNA from their own GBM stem cells. This significantly improved clinical outcome (Vik-Mo et al, Cancer Immunol Immunother. 2013;62:1499-509). One out of four of the patients are still alive.

The responders have a median survival of 7 years and are still recurrence free. A randomized trial of the vaccine was certified by all required authorities, and started in the spring of 2018. This study is currently including patients. Our intention in the current study is also to clarify why some patients respond and others do not; by in-depth studies of individual tumors and treatment responses.

Individualized systems medicine strategy to target GSCs in patients with recurrent glioblastoma:
In collaboration with our partners at the Finnish Institute for Molecular Medicine, we are combining the novel technical possibilities of high-throughput screening and deep sequencing with our established know-how on patient specific tumor stem cell cultures. Exploring a panel of 525 drugs established in clinical use, as well as drugs in early-phase development, at five different concentrations, we have screened stem cells from individual tumors for drug sensitivity. The approach has been coined Individualized Systems Medicine. This study has shown that GBMs from individual patients are very heterogenous with respect to drug sensitivity (Skaga et al. 2019).
A clinical early phase trial for feasibility evaluation of this strategy is in the process of regulatory approval.

Coordinated undermining of survival paths with nine repurposed drugs (CUSP9) and temozolomide in patient-derived GBM samples:
A major barrier to effective treatment in glioblastoma is the simultaneous activity of multiple survival and growth-promoting mechanisms. A conceptually new treatment approach has emerged focusing on coordinated blockade of the native survival paths of GBMs. The coordinated blockade is undertaken by 9 clinically well-known and repurposed drugs concomitant with the cytotoxic and standard of care, temozolomide, in a drug cocktail termed CUSP9. We have evaluated the in vitro efficacy of CUSP9 in patient-derived GBM samples using clinical relative drug concentrations across several different experimental cell assays. The coordinated approach has demonstrated a broad efficacy among several patient samples and experimental cell assays, and as the drugs have well-known safety profiles the results are intriguing for translation to patient treatment (Skaga et al. 2019).

Characterization of invasive GCSs at the single cell level:
Glioblastomas are characterized by diffusely infiltrative growth. To investigate the invasive properties of glioblastoma cells we film cells while they invade into rodent brain slices or 3D-biomatrixes using time-lapse microscopy. We have identified subpopulations of cells with different invasive potentials. These cells display specific movement patterns and morphology (Fayzullin et al. 2019). We are now developing this strategy further to encompass functional characteristics combined with time-lapse microscopy.

Molecular targeting of cancer stem cells in glioblastoma:
By performing a systematic comparison of gene expression in adult human neural stem cells and GSCs, we have identified differentially expressed genes that may have the potential as new and specific targets for treatment of glioblastoma. Our results from exploring several of these genes and pathways in-depth, suggest a functional role for the Wnt signaling pathway (Kierulf-Vieira KS et al.2020), PBK and NAT12/NAA30 in GBM. As a strategy to more efficiently and directly identify targets that are likely to trigger a therapeutic response, we are currently focusing on genetic high throughput loss-of-function screening as tools to identify both individual and shared target hits in patient derived GSC cell cultures.

The molecular basis for tissue stiffness in glioblastoma:
Magnetic resonance imaging elastography is a novel imaging modality with the potential to preoperatively identify surgical risk by evaluating tumor stiffness. Through a collaboration with Dept. of Diagnostic Physics, we are further exploring the molecular basis for MRI heterogeneity in glioblastoma.

A molecular pipeline for individualized treatment in pediatric brain cancers:
Brain cancer is the most common cancer in children. We are exploring the use of rapid molecular characterization using Nanopore technology combined with stem cell biology and high throughput drug-screening to develop better individualized treatment strategies. In our recent publication, we demonstrate how this method can lead to sensitive, robust and rapid intraoperative molecular classification of brain tumors (Djirackor et al. 2022). The project was highlighted as the first main hall lecture on the “London Calling Conference 2021”.

Research profile and aims
Main research aim is assessment of brain, medulla and peripheral nerve function and surgical treatment:
- Epilepsy surgery
- Deep brain stimulation
- Other electrical nerve tissue stimulation
- Assessment of brain function through EEG
- Stereotactic intracranial recording (SEEG)
- Function localization through intracranial recordings and stimulations
- Clinical assessment through machine learning
- Drug effect prediction through machine learning in EEG

Ongoing projects
- Cognitive function assessment through SEEG
- Consciousness assessment through EEG
- Dynamics of large-scale cortical networks during general anesthesia
- Changes in brain connectivity during the Wada test
- Epilepsy surgery outcome
- Changes in connectivity in preterm children and prediction of long term outcome
- Adjuvant treatment with Cyclokapron in surgical treatment of CSDH
- ProTLE – follow up study of newly diagnosed temporal lobe epilepsies
- Continues spike wave during sleep (CSWS)
- NORSTIM – prospective study of DBS in STN in Parkinson disease
- DBS in tremor
- DBS in epilepsy
- Microbiota in Nucleus Subthalamicus and CSF in patients with Parkinson disease
• Predictors of VNS stimulation
• New treatment in chronic subdural haematomas
• Interictal EEG features as biomarkers in presurgical epilepsy work up
• Refractory status epilepticus
• Laser ablation in Epilepsy
• Genetic mapping in Moya Moya
• Accuracy verification of a robotic system on a phantom
• Robot assisted methods
• European SEEG collaboration (EBRAINS->HIP)
• Resting state fMRI for epileptic focus localization

Research profile and aims
The Movement, muscle and neurodegeneration group was founded in 2019, bringing together researchers studying a spectrum of chronic neurological disorders causing impaired motor function. Our areas of interest range across disorders affecting the planning and calibration of movements in the basal
ganglia (Parkinson's disease, Huntington's disease, dystonia and tremor), diseases affecting the upper and lower motor neurons (amyotrophic lateral sclerosis and spinal muscular atrophy) and neuromuscular disorders (myasthenic syndromes and primary myopathies).

In a majority of the conditions we study, the etiology is neurodegenerative, genetic or both.

Our scientific approaches span from translational studies, based largely on laboratory and bioinformatic methodologies, to observational studies and clinical trials recruiting patients from the Department of Neurology.

The Movement, muscle and neurodegeneration group is a thematically overarching research group organized into five subgroups focused on specific diseases and methodologies:

- Clinical studies of movement disorders
- Molecular studies of Parkinson's disease
- Huntington's disease and neurodegenerative genomics
- Rare Neuromuscular Disorders
- Myasthenia gravis and amyotrophic lateral sclerosis

Ongoing projects

We perform clinical studies, including a prospective study of early-stage Parkinson’s disease and clinical trials on the efficacy of deep brain stimulation for Parkinson’s disease, dystonia, and tremors. Patients with Huntington’s disease are included in international registries. Laboratory research is focusing on genetic and genomic studies of Parkinson’s disease, and epigenetic studies of Parkinson’s disease and Dementia with Lewy bodies. Furthermore, several projects are examining the role of inflammation in neurodegeneration.

The Rare Neuromuscular Disorders Project Group focuses on juvenile and adult neuromuscular disorders and the main objective is to contribute to early detection and diagnostics of disease, better treatment and multidisciplinary care for the people affected by the rare neuromuscular disorders and their relatives. The research is mainly clinical research related to myotonic dystrophy, Charcot-Marie Tooth, spinal muscular atrophy and Duchenne's muscular dystrophy.

The last project group focuses on clinical studies of myasthenia gravis and amyotrophic lateral sclerosis, and participates in national and international projects related to genetic studies, imaging and clinical trials.

Research profile and aims

The main goal is to conduct high-quality cerebrovascular research, leading to new knowledge and improved treatment of stroke patients. The main research areas are:

- **Acute stroke, inflammation and cerebrovascular monitoring.** The aim of this group is to study the role of inflammation and gut microbiota in cerebrovascular diseases and to study pre- and intracerebral circulation and the impact of cerebral monitoring.
- **Pre-hospital and acute stroke.** The focus of this group is to improve and implement prehospital diagnostics and treatment of acute stroke patients.
- **Acute stroke treatment and atrial fibrillation.** AI (Artificial intelligence) in stroke diagnostics. The scientific research interest is acute stroke treatment, diagnostic workup in acute ischemic stroke and the relation between stroke and atrial fibrillation.
- **Stroke and cognition.** This group aims to quantify and measure levels of cognitive impairment after stroke and to identify biological and clinical markers associated with prognosis for cognitive disorders following incident stroke.

Ongoing projects

- Acute cerebral thrombi: mapping the immuno-thrombotic content -developing clinical tools for identifying the embolic source.
- Advanced ultrasound methods in the assessment of carotid plaque instability
- MIST: Microbiota in Stroke Trial. The Gut and Oral bacteria in atherosclerosis and ischemic stroke
- BRIDGE study: Bridging pregnancy and fetal microchimerism with long-term maternal cardiovascular and neurovascular health.
- Optimizing cerebral monitoring in acute ischemic stroke and subarachnoid hemorrhage. Improving hemodynamic diagnostics using transcranial ultrasound in a neurocritical care cohort.
- Nor-CARRAD: Norwegian prospective ultrasound study of carotid radiation-induced lesions in neck cancer patients.
- Para-NASPP (Norwegian Acute Stroke Prehospital Project); Diagnostics and triage of acute stroke by the National Institute of Stroke Scale (NIHSS) by paramedics.
- Treat-NASPP; Prehospital advanced diagnostics and treatment of acute stroke.
- The rural CT-study. A case-control study with pre-hospital treatment with intravenous thrombolysis in acute stroke at “Sjukestugu Ål”.
- OSCAR: The Oslo Acute Revascularization Study.
- NOR-FIB: The Nordic atrial fibrillation and Stroke Study, a prospective observational study of the occurrence of AF in patients with cryptogenic stroke / TIA.
- Ten-CRAOS: A randomized controlled trial with tenecteplase in central retinal artery occlusion
- AI-STROKE: Optimizing Acute Ischemic Stroke Diagnostics Using Artificial Intelligence.
- The Moyamoya Task Force: Multi-disciplinary translational project for improving patient care in Norway and unraveling the mysteries of Moyamoya.
- NorCOAST; The Norwegian Cognitive impairment after Stroke study. A descriptive cohort study recruiting patients from five Norwegian hospitals.
- Hidden impairment after stroke.
ACE 1950; The ACE 1950 Study is a prospective, population-based, cohort study of the cardio- and cerebrovascular health of all men and women born in 1950 in Akershus County, Norway.

Research profile and aims
ERGO has been active in epilepsy research for about 25 years and consists of two sub groups:

- Research group for Clinical Epilepsy Research
- Research Group for Translational Epilepsy Research

Research within ERGO is currently focusing on five main areas:

1) Epilepsy-Translational Research. This focuses on research on epileptogenesis, glial cells and genetic and clinical studies. The project leader is Kjell Heuser. The initial studies are basic research, using several in vivo epilepsy models. In addition, larger patient trials are used, in which the clinical, radiological (MRI), and neuropsychological development of TLE is monitored over time.
Recently, we have also started epigenetic studies investigating changes in DNA methylation and gene expression during epileptogenesis. (See publications Berger T et al, PloS-One 2019, Berger T et al, Frontiers in Neurology 2020 and phd-thesis, Toni Berger 2022).

2) “Gender issues”, endocrinology and long-term effects of AEDs. The leader is Sigrid Svalheim. "Gender issues" have been an important area of research for the group over many years, with many PhD theses. The current major focus is studying the long-term side-effects of AEDs on hormones, immunology, haematology and bone health. The effects of epilepsy and antiepileptic drugs on inflammation parameters are now studied both clinically and using a zebra-fish model (see i.e. Mochol M et al, Seizure 2020; Mochol et al, Epilepsy Res 2021).

3) Epilepsy and cardiology / SUDEP (sudden unexpected death in epilepsy patients). The project leader is Dag Aurlien, who is presently based at Stavanger University Hospital. The project is a collaborative venture between Oslo University Hospital (OUS) and Stavanger University Hospital. Both clinical and basic animal research is ongoing (see i.e. González A, et al, Epilepsy Res 2020; González et al, Case Rep Neurol 2022).

4) Status epilepticus (SE). OUH has a large population of patients who has experienced SE and epidemiological studies have recently been performed regarding underlying causes, treatment, outcome etc. We will now especially focus on possible predictors for outcome and study in more detail treatment of the super refractory cases (for 2020, see: Habhab SF et al, Epilepsy Behav 2020; Roberg et al, JAMA Neurology 2022).

5) Traumatic brain injury and posttraumatic epilepsy. Studies to investigate possible predictors for posttraumatic epilepsy have recently been started, in collaboration with colleagues in Italy and USA. Primarily, factors of relevance to inflammation will be the focus of our studies.

In addition to these five main areas of research, the group also has interests in deep brain stimulation (DBS) in epilepsy and ketogenic diets.

Ongoing projects

- Can the brain’s glial cells be a point of attack for novel AED treatments?
  This is a major project in which, among other approaches, a mouse model is being used to investigate how epilepsy arises and evolves over time. The main question is how glia cells behave during the development and worsening of epilepsy, and whether these changes can be affected by various drugs such as AEDs, anti-inflammatory drugs, drugs that affect intracellular cell signalling etc. Within this project the group has hosted a Special Issue in Frontiers of Neurology in 2020.
  In extension to this study, we are now also investigating possible epigenetic changes taking place during epileptogenesis. This is done in collaboration with Dr. Kaja K. Selmer and her group in Research Group for Neurogenetics, Division of Clinical Neuroscience, OUS. Studying possible mechanisms involved in epileptogenesis may open new treatment strategies to prevent epilepsy, i.e. after stroke and brain injuries.
  One PhD degree was completed within this research area with dissertation in February 2022.
• **Is epilepsy a progressive disease?**
  This long-term study focuses on changes in the clinical, radiological and neuropsychological picture in patients with temporal lobe epilepsy (Pro-TLE). Comprehensive investigations are conducted on patients with newly diagnosed temporal lobe epilepsy at various time points over a 10-year period. Two papers were recently published; Bjørke AB et al, Epilepsy & Behav 2021 and Bjørke AB et al, Front Neurol 2022.

• **Long-term effects of AEDs**
  Patients starting treatment with the AEDs levetiracetam and lamotrigine will be followed prospectively for 2-years in terms of immunological, hormonal, and haematological adverse reactions, and possible changes in bone health. The data will be collected through interviews, questionnaires, blood tests, and bone density measurements. This project is supported with a 50 % PhD student from Østfold Hospital Trust.

  As part of this project, studies on the effect of AEDs on gene expression related to immune genes in zebra-fish have also recently been finished in collaboration with NMBU (Norwegian University of Life Sciences), and a study on the effect of AEDs on markers for inflammation in humans with epilepsy is performed together with collaborators in OUH.

• **Epilepsy and cardiology**
  It has become increasingly clear that several epilepsies are channelopathies, as are many cardiac arrhythmias, and are associated with many of the same channels and ions. The relationship between epilepsy and cardiac arrhythmias like the long QT syndrome (LQTS) is studied. This is also of central importance for understanding sudden unexpected death in epilepsy (SUDEP). We are also studying the impact of several years of active epilepsy on cardiac function.

• **National registration of refractory status epilepticus**
  We are collating national experiences on how patients with this condition are treated in Norway and how this can be improved. As there are only a few such patients at each centre, joint exchange of experiences is essential. Collection of data commenced in 2015. A national reference group for SE has been established.

• **Deep brain stimulation (DBS) in epilepsy**
  In this study, patients with hard-to-treat epilepsy are treated with DBS using a blinded study design. The clinical work is now completed and most results published. A phd thesis will be submitted for evaluation within 2022.

• **Traumatic brain injury and posttraumatic epilepsy**
  A project to study the possible predictive value of different parameters, especially related to inflammation, measured immediately after traumatic brain injuries on the frequency of posttraumatic epilepsy was started in 2021. This is an international collaborative work with groups from US and Europe and with financial support from the US Department of Defence.
### Most important national and international collaborators

**National**

- Dept. of Cardiology, OUH, Prof Kristina Hermann Haugaa
- Kaja Selmer’s research group, Div. of Clinical Neuroscience, OUH
- National Centre for Epilepsy
- Stavanger University Hospital
- Østfold Hospital Trust
- Institute of Basic Medical Science, Glia cells research group (GLIALAB), UiO, group leader Rune Enger
- Prof Erik Ropstad, NMBU (Norwegian University of Life Sciences)
- Prof Pål Aukrust, Research Institute of Internal Medicine, OUH
- Institute of Basic Medical Science, UiO, Prof Farrukh Chaudry

**International**

- Institute of Cellular Neurosciences, Medical Faculty, University of Bonn, Germany (Prof. C. Steinhäuser)
- Pavel Klein, the CURE programme for post-traumatic epilepsy research, Washington, USA
- Annamaria Vezzani, Department of Neuroscience, IRCCS – Mario Negi Institute for Pharmacological Research, Milan, Italy

### Scientific production of the research group in 2021

**Peer-reviewed original research articles:** 6

**Abstracts:** 1

**International reviews:** 2

**National publications:** 4

**Speaker at international congresses:** 7

  - 5 at 1st Nordic Status Epilepticus Meeting, Oslo.

**Arranged international congresses:** 1

  - 1st Nordic Status Epilepticus Meeting, Oslo, May 2021

**Selected publications:**

Heuser K, Enger R.
“Astrocytic Ca2+ Signaling in Epilepsy”

Taubøll E, Isojärvi JIT, Herzog AG.
“The interactions between reproductive hormones and epilepsy”

**Funding**
- The South-Eastern Norway Regional Health Authority, 1 PhD
- EU grant, 722053, Marie S Curie programme, 1 PhD
- Internal, OUH, 2 PhD (klin stip, D-still)
- Østfold Hospital Trust (0,5) PhD
Multiple Sclerosis (MS)

Group Leader
Elisabeth Gulowsen Celius, Professor and Consultant of Neurology (MD/PhD), Department of Neurology, OUH and Institute of Clinical Medicine, UiO (e.g.celius@medisin.uio.no/ uxeIgu@ous-hf.no).

Group members
- Elisabeth Gulowsen Celius, MD/PhD, Professor, Dept of Neurology, OUH/UiO
- Hanne Flinstad Harbo, MD/PhD/MHA, Professor and Head of Dept of Neurology, OUH/UiO
- Tone Berge, MSc/PhD, Head of Section – Neuroscience Research Uni, FOU dept, OUH, Professor, OsloMet
- Steffan D. Bos-Haugen, MSc/PhD, researcher, Dept of Neurology and Dept of Medical Genetics, UiO
- Daniel Rinker, MSc/PhD, post doc, Dept of Neurology, OUH
- Pål Berg-Hansen, MD/PhD, Consultant, Dept of Neurology, OUH
- Gro Owren Nygaard, MD/PhD, Consultant, Dept of Neurology, OUH
- Sigrid Aune de Rodez Benavent, MD/PhD, Dept of Ophthalmology, OUH
- Anna M. Eriksson, MSc/PhD fellow, Dept of Psychology, UiO
- Ina S. Brorson, MSc/PhD fellow until June 2021/post doc, Dept of Neurology, OUH/UiO
- Einar August Høgestøl, MD/PhD, Resident, Dept of Neurology, OUH, Associate Professor Dept of Psychology, UiO
- Cecilia Smith Simonsen, MD/PhD fellow, Drammen Hospital/OUH
- Heidi Øyen Flemmen, MD/PhD fellow, Consultant, Skien Hospital/OUH
- Synne Brune, MD/PhD fellow, Resident, Dept of Neurology, OUH
- Line Broch, MD, PhD fellow, Consultant, Drammen hospital/OUH
- Chiara Cappelletti, MSc/PhD fellow, OsloMet
- Marte Wendel-Haga, MD/PhD, Consultant Kysthospitala and Dept of Neurology, OUH
- Lars L. Skattebøl, MD/PhD fellow, Resident, Dept of Neurology, OUH, UiO
- Mathias H. Øverås, MD/PhD fellow, Resident, Dept of Neurology, OUH, UiO
- Marie Strømstad, MSc, Research Assistant, OUH
- Martine Mesel Isom, MSc, Research Assistant, OUH
- Synne Johannesen, Study nurse, FOU Department, OUH
- Marton König, MD/PhD, Resident, Dept of Neurology, OUH
- Ingeborg H. Lie, MD, Resident, Dept of Neurology, OUH

Associated Group Members
- Stine Marit Moen, MD/PhD, Head of research and development, MS Centre Hakadal
- Piotr Sowa, MD/PhD, Consultant, Division of Radiology and Nuclear Medicine, OUH
- Rigmor Lundby, MD/PhD, Consultant, Division of Radiology and Nuclear Medicine, OUH
- Mona K Beyer, MD/PhD, Professor, Division of Radiology and Nuclear Medicine UiO/OUH

This year we have had four students connected to our group, writing student theses:
- Silje Espevik, medical student (Brean, Celius)
- Anniken K. Jørgensen, medical student (Celius)
- Matthias Rasmussen Fuglestad, psychology student (Landrø, Høgestøl)
- Jacob Ring, psychology student (Landrø, Høgestøl)
Research profile and aims

Multiple Sclerosis (MS) research group at the Department of Neurology, OUH and UiO, aims to identify characteristics and susceptibility factors of MS, and to contribute to a better understanding of the disease and development of better treatments. We perform genetic, immunological, clinical, epidemiological, environmental, MRI and translational studies of MS in collaboration with national and international research partners and networks.

Ongoing projects

- Tone Berge, researcher: Vitamin D responsive regulation of susceptibility genes for autoimmune diseases. In collaboration with Professor Lisa Barcellos at the University of California
- Steffan Daniel Bos, researcher: Identification of molecular mechanisms and biomarkers of Multiple Sclerosis (MS-biomarkers) – RNA sequencing of CD4+ and CD8+ T cells as potential biomarkers of MS phenotypes
- Anna M. Eriksson, PhD fellow: Identification of molecular mechanisms and biomarkers of Multiple Sclerosis (MS-biomarkers) – molecular characterization of DEXI and other MS susceptibility genes. Supervisor: Tone Berge, Co-supervisors: Hanne F. Harbo and Steffan D. Bos
- Ina S. Brorson, Postdoc: Defining and characterizing molecular pathways in multiple sclerosis and single cell analysis of MS patients’ PBMCs
- Daniel Rinker, Postdoc: Integrating genetic and MRI data in multiple sclerosis
- Cecilia Smith Simonsen, PhD fellow: Predictors for disease susceptibility and disease progression in Multiple sclerosis, Supervisor: Elisabeth Gulowsen Celius, Co supervisors: Stine Marit Moen
- Heidi Øyen Flemmen, PhD fellow: Socioeconomic factors as predictors for disease susceptibility and disease progression in Multiple sclerosis, Supervisor: Elisabeth Gulowsen Celius, Co supervisor: Pål Berg-Hansen
- Line Broch, PhD fellow: Fatigue in Multiple Sclerosis. Supervisor: Elisabeth Gulowsen Celius, Co-supervisor: Heidi Ormstad
- Chiara Cappelletti, PhD fellow: Novel molecular mechanisms for severe brain disorders – a study using complex data analyses. Supervisor: Tone Berge, Co supervisor: Mathias Toft
- Lars L Skattebøl, PhD fellow: Advanced MRI in the clinical study NOR-MS. Supervisors Gro Nygaard, Einar A. Høgestøl, Hanne F Harbo
- Anna M. Eriksson, Martine M Isom, Tone Berge: CLEC16A and other candidate genes
- Ina S. Brorson and Steffan Bos: Single cell analysis of peripheral immune cells from MS patients
Synne Brune, Einar A. Høgestøl, Hanne F. Harbo, Sigrid A. de Rodez Benavent, Tone Berge: Neurofilament analysis in MS research and clinical practice. (Biogen Idec)

Mathias Øverås MD/PhD fellow: NOR-MS Supervisor: Gro O Nygaard, co-supervisors: Hanne F. Harbo, Tone Berge

Hanne F. Harbo, Steffan D. Bos, Pål Berg-Hansen, Mona Beyer, Synne Brune: BorrrSci study, lead from Kristiansand (South-Eastern Norway Multi- Regional Health Authority grant)

Hanne F. Harbo, Steffan D. Bos, Pål Berg-Hansen, Tone Berge, Elisabeth G Celius Mona Beyer, Einar A. Høgestøl, Synne Brune, Goran Petrovski, Dragana Drobnjak Nes, Sigrid Aune de Rodez Benavent: MultipleMS - partner in EU Horizon 2020-project (Harbo Oslo PI)

Hanne FNor-MS Harbo, Einar A. Høgestøl, Sigrid de Rodez Benavent, Steffan Bos, Tone Berge, Synne Brune, Elisabeth G Celius, Mona Beyer: Sys4MS- Biotek 2021/NFR Project. (Harbo Oslo PI)

Einar A. Høgestøl, Hanne F. Harbo and others: Brain age in MS with Tobias Granberg, Karolinska Institute, Sweden

Einar A. Høgestøl, Hanne F. Harbo, Dan Rinker, Elisabeth Celius, Piotr Sowa, Mona K Beyer: MAGNIMS collaboration on various MRI projects

Einar A. Høgestøl, Hanne F. Harbo, Dan Rinker, Elisabeth Celius, Piotr Sowa, Mona K Beyer: NORMENT collaboration on various MRI projects

Elisabeth G. Celius, Pål Berg-Hansen, Stine Marit Moen/MS Centre Hakadal and SINTEF: AutoActive: Tools and Methods for Autonomous Analysis of Human Activities from Wearable Device Sensor Data (SINTEF PI)

Elisabeth G. Celius, Stine Marit Moen/MS Centre Hakadal and SINTEF: Digital oppfølgng og støtte for personer med multippel sklerose (MS-DOS)

Elisabeth G. Celius: Lemtrada PASS, international observational study. EGC national investigator

Elisabeth G. Celius, Stine Marit Moen/MS Centre Hakadal, Tone Berge and OsloMet: Use of functional near-infrared spectroscopy analyses for studies of neuroplasticity in MS patients – a pilot study

Gro O. Nygaard, Hanne F Harbo and Oslo MS Research Group: NOR-MS. Norwegian multicenter study of cladribine and rituximab (NOR-MS)

Gro O. Nygaard, Marton König, Elisabeth Gulowsen Celius, Hanne F Harbo, Ingeborg Aaberge (FHI), Audun Aase (FHI), ÅsLaug R Lorentzen (SSHF), Lars L Skattebøl: Vaccine responses in MS patients

Gro O. Nygaard, Einar Høgestøl, Lars L Skattebøl, Piotr Sowa, Hanne F Harbo, Kristin Wesnes (St Olavs Hospital): 7T MRI in NOR-MS

Gro O. Nygaard, Rigmor Lundby, Einar A. Høgestøl, Marton König, Hanne F. Harbo: OVERLORD-MS

Research profile and aims
The focus of our research group is to generate research based knowledge on pathomechanisms (including molecular mechanisms as e.g. genetics), prevention, treatment and rehabilitation of pain, injuries and diseases in the musculoskeletal and nerve system, including headache and migraine.
Our work is highly interdisciplinary, including experts in clinical medicine, physiotherapy, psychology, physiology, nutrition, mathematics, genetics and molecular biology.
The subgroups of NEMU each have their specific areas and goals, as listed below.

Subgroups – their ongoing projects and collaboration partners

Microneurography and mechanisms
Headed by Ellen Jørum

Ongoing projects
- Microneurography studies of neuropathic pain
- Complex regional pain syndrome: clinical features and possible mechanisms
- Pain mechanisms and genetic causes of insensitivity to pain

Collaboration
- Heidelberg University – Medical Faculty Mannheim

Clinical trials
Headed by Kjersti Storheim

Ongoing projects
- BackToBasic; TNF alfa blocker treatment of chronic low-back pain with Modic changes, a randomized double blind multicenter placebo controlled trial
- The AIM-study (Antibiotics In Modic changes); antibiotic treatment of chronic low-back pain with Modic changes, a randomised double blind multicenter placebo controlled trial
- Epigenetic and molecular biomarkers in chronic low back pain and Modic changes. A case-control study
• Lumbar disc prosthesis versus multidisciplinary rehabilitation in chronic back pain and localized degenerative disc. Long term follow-up of a randomized multicentre trial
• The NORwegian Degenerative spinal STENosis-trial (the NORDSTEN-study)
• Spinal surgery in Norway. Trends, costs and regional differences
• Back Pain in Elderly (BACE). A prospective cohort study of older people visiting primary care with a new episode of back pain
• Neck surgery in Norway
• Cross cultural validation of outcome measurement tool and evaluation of treatment options for patients with plantar fasciopathy
• People with intellectual disabilities and vulnerabilities for harmful sexual behavior and abuse
• The MI-NAV project: Can Motivational Interviewing facilitate Return-to-Work in sicklisted people with musculoskeletal disorders? A randomised trial within NAV (hosted at OsloMet)
• Applying Artificial Intelligence in Developing Personalized and Sustainable Healthcare for Spinal Disorders (AID-Spine)
• Illness perceptions and coping with chronic illness
• Ingenting om oss uten oss. Et behovsidentifiserende og inkluderende prosjekt for personer med muskel-/ skjelett sykdommer og plager – basert på prinsipper fra The James Lind Alliance

Epidemiology
Headed by Ingrid Heuch and Synne Øien Stensland

Ongoing projects

Adults (Heuch):
• The Acute Low-Back Pain Study. Clinical, neurophysiological and genetic risk factors
• Risk factors for anterior cruciate ligament injuries in Norwegian adolescents and young adults: (the ACL/HUNT studies)
• RygGen
• Risk factors for development of chronic pain after hospitalization for acute low back pain and/or sciatica (RUKSAR)
• Childbirth, hormonal factors and low back pain - a prospective epidemiological survey

Children and adolescents (Stensland):
• Physical activity and sport participation during adolescence and musculoskeletal complaints in adulthood. A population based cohort study (PI: Storheim)
• Killing pain? Use of analgesic, sedative and anxiolytic medication and the development of psychiatric illness in adolescents (‘Vold og helseplager hos ungdom’) (PI: Stensland)

Brain plasticity and neuropsychiatry

Group Leader
Torbjørn Elvsåshagen; M.D., PhD, Researcher; Department of Neurology, OUH (telvsaha@ous-hf.no) and Norwegian Centre for Mental Disorders Research (NORMENT), UiO (torbjorn.elvsashagen@medisin.uio.no)

Research profile and aims
Our group conducts research in the fields of adult brain plasticity and neuropsychiatry. Plasticity – the capacity for change – is increasingly recognized as an intrinsic property of the adult brain and may play important roles in the etiologies and treatments of neurological and psychiatric illnesses. Neuropsychiatry recognizes that the brain and mind are one, that mental illnesses are disorders of the brain, and that psychiatric symptoms are commonly found in neurological disorders. One important goal of neuropsychiatric research is to bridge the gap between neurology and psychiatry. Among the main aims of our current research are:

1. To examine whether structural and functional brain plasticity are core characteristics of the human sleep-wake cycle
2. To increase our understanding of how novel schizophrenia- and bipolar disorder-associated genetic variants affect synaptic function and plasticity
3. To examine the role of brainstem and thalamus regions in neuropsychiatric and neurological disorders

**Research profile and aims**

Our aims include contribution to development of novel and innovative methods for early detection, prevention, diagnostics and treatment of neurological diseases associated with cognitive health issues. Another branch of our research is concerned with environmental and biological factors in gender development, and qualitative research into subjective experiences of adolescence gender dysphoria.

Currently, our focus is primarily centered on development of accessible and next generation AI-models in identifying and estimate dementia in people at risk. Also, the group focus on the development of functional biomarkers of neurodegeneration with the EEG-based brain network models with artificial intelligence methods to identify crucial features of the aging brain’s functional integrity.

We are an international group of researchers which comes from a variety of different educational backgrounds, including medicine, psychology, physiotherapy, nursing and biological science. Our multidisciplinary approach to brain-behavior relations allows us to conduct research across various systems and cognitive levels; from molecules to cells to cognitive systems to behaviors. As part of our effort for international collaboration, the Cognitive Health Research Group applied and won the Human Brain Project Voucher call for harmonization between the Virtual Brain Cloud and AI-Mind. This will ensure a strength of the European collaboration between the AI-Mind project, and the EBRAINS infrastructure in the Human Brain Project.

Our broad research methods portfolio includes: Electrophysiological (EEG) source reconstruction and network modelling; event-related potential (ERP) techniques; positron emission tomography (PET) and radiochemistry; neuropsychological assessment; in-depth qualitative interview.
techniques; and physiotherapeutical interventions. Another new focus area includes artificial intelligence system with the use of deep learning techniques.

**Ongoing projects**
- AI-Mind – Intelligent digital tools for screening of brain connectivity and dementia risk estimation in people affected by mild cognitive impairment
- HumanBrainProject Voucher – Harmonization between Virtual Brain Cloud and AI-Mind
- Novel risk factor assay for Alzheimer’s disease – Multi-parametric quantification of HPG/HPTaxis dysfunction (AIRDEM)
- Effectiveness of somatocognitive therapy for the treatment of provoked localized vestibulodynia (the Pro-LoVe study)
- Gender dysphoria in adolescents – a qualitative study
- Gender dysphoria: Worldwide exacerbation, prevalence, and the impact of GnRH treatment on brain development – an investigation in a human and animal model (CONOS)

Research profile and aims
The aim of the neurohabilitation research group is 1) to conduct research that will lead to improvement of the quality of life of persons with developmental disabilities, 2) to investigate mechanisms behind brain dysfunction and damage that leads to developmental disability.

In collaboration with the municipality of Oslo, various departments at Oslo University Hospital, and Oslo Metropolitan University (OsloMet), we investigate the use of sensors for autonomic responses as a means of communication for developmentally disabled persons who are unable to express their needs.

To investigate mechanisms that underlie some forms of developmental disability we use clinical and preclinical approaches to elucidate mechanisms of toxicity of certain metabolites and microbes.

Ongoing projects
- Wearable sensors for autonomic responses as a means of communication for persons with developmental disability who lack the ability to express themselves
- Mechanisms of seizure generation and cell death during brain abscess formation, a preventable cause of developmental disability
- Mechanisms of cell death and seizure generation during formation of cystic brain tumors
- The effects on brain cells of propionic acid, a metabolite that causes cerebral dysfunction in an inborn error of metabolism
- The metabolism of glyceraldehyde, a cause of neurodegeneration through formation of advanced glycation end products
- Barriers to proper handling of persons with intellectual disability and harmful sexual behavior

Research profile and aims
The overall research aim for our group is to improve everyday living of people with physical and/or mental impairments. Within the setting of specialized rehabilitation, especially neurorehabilitation, we are interested in all aspects of body functions, activities and participation that injury or disease may affect. Our research activities comprise both subacute and chronic stages, and are organized in four groups:

- Acquired Brain injuries
- Spinal cord injuries
- Movement dysfunctions
- Rare disorders

Ongoing projects
A large number of studies are ongoing, mainly within the following areas:

- Specialized rehabilitation interventions for patients with acquired neurological injuries as stroke, spinal cord injury or traumatic brain injury
- Telerehabilitation
- Rehabilitation technology, e.g. gaming, exoskeletons, virtual reality
- Rehabilitation of acquired injuries in children and adolescents
- Movement disorders, spasticity, gait analysis
- Rare disorders as e.g. Marfan’s syndrome, achondroplasia
